

## Pig Attacked by Dog: Multiple Lacerations

Information displayed is provided by our customers. MicrocynAH<sup>®</sup> is a great addition to any wound care regimen. Always consult with a veterinarian for systemic conditions.

<b>Owner Name:</b>	Jackie Walther
<b>Patient Type &amp; Name:</b>	Porcine - Oink Jackson

**Wound/Ailment:**

Oink Jackson came to live with me through the worst circumstances imaginable. I was visiting a friend when I heard a pig squealing and dogs barking. To my horror the neighbors were using Oink to train their dogs to fight. I immediately went over and confronted them. They called their dogs off and left Oink there to die. I asked if I could take him and they said they didn't care what I did with him. So I borrowed a crate from my friend and loaded him up. I had an empty chicken cage, so that is what Oink would call home for the next month. I tried to clean his wounds but he was so scared he wouldn't let me get that close. So I busted out the MicrocynAH spray, since he would allow me to get close enough to spray his wounds, which wounds were severe. He was missing one of his ears, had one of his eyes torn open and had countless bites all over his body, the worst being on his back right leg. Having had pigs in the past I knew stitches were not an option. So I began to spray him 3 times a day with MicrocynAH. This happened in August in Florida when the temperature was in the high 90s. Never once did he develop an infection or having trouble with flies. We continued this course for one month and used two bottles of MicrocynAH. It's been nine months and I am happy to report that Oink Jackson is a happy little pig.

<b>MicrocynAH<sup>®</sup> Product:</b>	MicrocynAH <sup>®</sup> Wound & Skin Care - Liquid
<b>Application:</b> (initial usage, current usage, protocol)	Applied MicrocynAH <sup>®</sup> directly to infected skin three times a day for one month.
<b>Healing Period:</b>	One month.

### IMMEDIATE ACTING, ONE-STEP WOUND & SKIN CARE

MicrocynAH<sup>®</sup> Wound and Skin Care products are innovative topical solutions for the care of wounds and irritations. MicrocynAH<sup>®</sup> is non-toxic, steroid-free and antibiotic-free and will not sting when applied. There is no rinsing or staining after use. MicrocynAH<sup>®</sup> is intended for OTC management of skin abrasions, lacerations, minor irritations, cuts and intact skin. Aids in the healing process by debriding and cleaning wounds, cuts and lacerations.

- ✔ Post-Surgical Sites
- ✔ Irritated Skin
- ✔ Scratches
- ✔ Cleaning the Umbilical & Navel
- ✔ Cracked Teats
- ✔ Sores
- ✔ Lacerations

\* For superficial use with intact cornea \*\* Not for inner ear infections

# What Causes Hot Spots and Itching in Pets?

Hot spots, also known as acute moist dermatitis, are red, moist, hot and irritated lesions that are typically found on a dog's head, hip or chest area. Hot spots often grow at an alarming rate within a short period of time because dogs tend to lick, chew and scratch the affected areas, further irritating the skin. Hot spots can become quite painful. Anything that irritates the skin and causes a dog to scratch or lick himself can start a hot spot. Hot spots can be caused by allergic reactions, insect, mite or flea bites, poor grooming, underlying ear or skin infections and constant licking and chewing prompted by stress or boredom.

Itching or pruritus is defined as an unpleasant sensation within the skin that provokes the desire to scratch. Itching is a sign, not a diagnosis or specific disease. The most common causes of itching are parasites, infections and allergies. There are many skin diseases that do not initially cause itching. Itching may develop because of secondary bacterial or yeast infections.

## Finally...A Solution That Actually Works!

The unique combination of advanced hypochlorous acid and soothing dimethicone skin protectant are now available in the patented MicrocynAH® animal dermatology products from Oculus. These products effectively help relieve the pain and itch of skin irritations, lacerations, abrasions and minor burns. Also for the management of irritation and pain from minor sunburn.

The FDA has now approved the use of dimethicone as a skin protectant in over-the-counter products and the Cosmetic Ingredient Review panel has assessed it as safe to use in personal care products.

No other animal healthcare products provide this novel mix of advanced hypochlorous acid and dimethicone.
